

LIFT YOUR EXPECTATIONS

Meet Our NEW RC-Series Duo Cylinder.

LONGER LASTING. Unique GR2 bearing system protects the longer stroke RC-Series Duo cylinder models by surrounding the seal. This innovative design distributes lateral loads more effectively, increasing cylinder life, to help you stay on the job longer.

FASTER. Heavy-duty pre-tensioned spring improves retraction rate to get the job done faster. Easy access design (requiring only standard shop tools) reduces maintenance down time.

TOUGHER. The RC-Series Duo's new GR2 bearing technology easily withstands lateral forces and dynamic loads preventing galling and premature bearing failure. It keeps your work on schedule – safely.

Experience the dramatic boost of productivity that only the NEW RC-Series Duo Cylinder can give you. Ask your representative for more information or visit us online. Lift your expectations.
